AMENDMENTS TO THE SPECIFICATION:

Please add the following paragraph to the specification after the final paragraph ending on page 19, line 8:

An exemplary embodiment in accordance with this invention is a method of sequencing at least two disparate signal sets. The method comprises transmitting a first signal set at a first time, said first signal set including an electronic cache marker and an electronic instruction to the local storage cache to retain said first signal set in a local cache. The method also comprises transmitting a second signal set at a second time, said second signal set including an electronic recall marker that uniquely identifies the cache marker of the first signal set and that directs a receiver to sequence said first signal set with said second signal set when said second signal set is output from the receiver.
